SUMMARY

Data Engineer (M.S. Computer Science) with hands-on experience building scalable, high-performance data pipelines, cloud-native data platforms, and event-driven architectures supporting financial and enterprise-grade systems. Proficient in Python, Java, SQL, Apache Kafka, Spark, and AWS/Azure. experienced designing ETL/ELT pipelines, data modeling, data validation, and real-time streaming infrastructure. Strong CS fundamentals in algorithms, distributed systems, and system design. Proven ability to collaborate across engineering, data science, and business teams to deliver reliable, low-latency data infrastructure at scale. eager to contribute to Goldman Sachs' data engineering mission.

EDUCATION

M.S. in Computer Science <i>California State University, Sacramento</i>	08/2023 – 05/2025
B.Tech in Computer Science Engineering <i>KL University, Hyderabad, India</i>	07/2019 – 05/2023

PROFESSIONAL EXPERIENCE

Data Engineer. Ads Platform & Audience Data Disney – Hulu Platform	08/2025 – Present <i>Remote, USA</i>
- Designed and implemented scalable ETL/ELT pipelines in Python and Java to ingest, validate, and transform high-volume audience and ad interaction data across Disney and Hulu streaming products. improved targeting accuracy and reduced pipeline failure rates for enterprise-grade, high-throughput data infrastructure. - Built event-driven streaming pipelines using Apache Kafka for real-time audience segmentation data; engineered cloud-native microservices on AWS (EC2, ECS, S3, RDS) and Azure (AKS, Azure SQL). improved pipeline scalability and reliability supporting millions of daily ad delivery events. - Designed and optimized data models for large-scale structured and unstructured datasets using SQL and MongoDB; implemented data validation and quality checks ensuring accuracy, completeness, and consistency. reduced data anomalies impacting downstream analytics and reporting. - Improved observability of data pipelines via structured logging and metrics dashboards enabling proactive issue resolution in production; built CI/CD automation with Jenkins and Docker including automated testing gates. collaborated with data scientists and PMs to translate business requirements into robust data engineering solutions.	
Software Engineer / Research Assistant IIIT Hyderabad	05/2021 – 05/2023 <i>Hyderabad, India</i>
- Built and optimized Python and SQL data pipelines for research data ingestion and transformation; integrated Elasticsearch for high-performance full-text search across thousands of records. applied strong data modeling, query optimization, and distributed systems knowledge to engineer reliable data infrastructure. - Developed REST APIs and backend services in Java and Python; implemented data validation and quality checks across research datasets. collaborated cross-functionally with research teams to deliver scalable, well-documented data engineering solutions using Git, CI/CD, and Agile workflows.	

PROJECT

Improving RRT* for 2D Parking Route Planning California State University, Sacramento	08/2024 – 05/2025 <i>Advisor: Dr. Kin Chung Kwan</i>
- Addressed non-holonomic constraints in autonomous parking by integrating Reeds-Shepp steering into RRT* for forward/reverse motion, applying spline fitting for curvature-continuous trajectories, node pruning, and two-phase sampling. achieved 100% parking success vs. 0% baseline across 3 structured environments. - Reduced average planning time from 3.0s to 0.2s (15x speedup) through rigorous algorithmic optimization; implemented in Python (Pygame, NumPy, Matplotlib) and MATLAB. demonstrated ability to engineer high-performance, data-intensive computational systems with measurable, reproducible results.	

TECHNICAL SKILLS

Data Engineering: Python, Java, SQL, Apache Kafka, Apache Spark, PySpark, ETL/ELT pipelines, data modeling, event-driven architecture, streaming systems, real-time data, batch processing

Cloud & DevOps: AWS (EC2, ECS, S3, RDS, IAM), Azure (AKS, Azure SQL), Docker, Kubernetes, Jenkins, CI/CD, Git, infrastructure automation, data validation, quality monitoring

Databases & Storage: PostgreSQL, MongoDB, Elasticsearch, SQL, NoSQL, data warehousing, data lakes, query optimization, schema design, data integrity

CS Fundamentals: Distributed systems, algorithms, system design, object-oriented programming, concurrency, multithreading, REST APIs, microservices, secure API development (JWT, OAuth 2.0, RBAC)
